## Background

Sound Solutions were chosen for this multiplex cinema being constructed within the town centre of Didcot, Oxfordshire based on our extensive experience with multiplex cinema fit-outs in the UK & Europe.

## Challenges

As one of the smaller Cineworld multiplex cinemas, Didcot produced its own unique issues with site size and access.

Along with the stretched fabric acoustic treatment to the side and rear walls of the auditoria Cineworld asked us to supply and install the black tissue faced mineral wool treatment to the screen wall. This included the fixing of timber support suitable for the screen installations which followed on from our works.

## Solutions

Working in limited space on a fast track program required forward thinking, efficient sequencing of the work and allocation of labour tasks.

## Results

The installation was completed on time, to budget and to a high standard.

The client and their architect expressed their satisfaction with our workmanship and attention to detail.
