to a new build 12 Screen  
Multiplex Cinema

### Capacity

Nominated Design & Build  
Sub-Contractor

### Architects

Warner Brothers

### Timescale

5 – 6 Weeks

### Contract Value

Under £150k

## Background

Warner Village Cinemas Shepherd's Bush (now Vue) is situated within the West 12 shopping and leisure complex. The cinema has 12 screens and can seat over 2,500 guests.

## Challenges

Located within a built up area in Central London as opposed to a 'greenfield' out of town site meant access routes and deliveries required careful planning.

To allow continuity of work moving from one auditorium to the next requires pro-active site and project management.

With our skilled operatives working at high levels using mobile access towers and air-driven power tools Health and Safety procedures needed to be rigorously implemented.

## Solutions

Sound Solutions site foreman and project manager monitored main contractor progress on a daily basis and liaised with their site team to ensure the auditoria were ready to accept our installation.

Health and Safety procedures were constantly reviewed throughout the project to ensure the balance between productivity and operative safety was never compromised.

## Results

The installation was completed to program and to our client's satisfaction.

This led to Sound Solutions successfully completing a further 3 multiplex cinemas for Warner Village in the next 18 months prior to Vue Cinemas acquiring the chain.

## Client Testimonial

*Sound Solutions Ltd supplied and installed the acoustical wall treatments to four Warner Village multiplex cinemas in the United Kingdom (Shepherds Bush, Staines, Islington and Fulham Broadway) and our projects in La Moraleja, Spain & Parma, Italy.*

*I found them to be flexible and responsive to design changes and their attention to detail & workmanship of a high standard.*

*Their overall performance was excellent ensuring that the tight fit out programs were adhered to.*
